Hinweis

WARNING!

Das Öffnen des Gerätes birgt eine potenziell gefährliche Situation, denn es kann eine gefährliche Spannung mit dem Risiko eines elektrischen Schlags anliegen!

WEEE-Reg.-Nr.: DE 90666819

Kategorie: 9

Geräteart: Diese Geräte erfüllen als
ÜBERWACHUNGS- UND KONTROLLINSTRUMENTE
in der Kategorie 9, Anhang 1B,
die Vorschriften des Elektro- und Elektronikgesetzes
vom 16. März 2005 und der RoHS-Directive 2002/95/EC.

Note

WARNING!

Opening the unit bears a potentially hazardous condition. A dangerous voltage that could pose a risk of electrical shock can be present!

WEEE-Reg.-No.: DE 90666819

Category: 9

Device type: These instruments comply with
and fall under category 9
MONITORING AND CONTROL EQUIPMENT
of Annex 1B of the RoHS-Directive 2002/95/EC.

TECHNICAL SPECIFICATIONS

Supply voltage:	220V / 240V / AC or 24V DC or $\pm 15V$ DC $\pm 10\%$
Fuse:	240V AC 100 mA slow blow 120V AC 200 mA slow blow
Current drain:	max. 60 mA at 115V AC max. 120 mA at 230V AC max. 300 mA at 24V DC
Ambient temperature:	0 to + 45 degrees Celsius
Scale range:	-12dB to +12dB ("1" to "7")
Scale graduation:	accord to British Scale Type IIa
Brighter scale marks at:	"1, 2, 3, 4, 5"
Additional brighter scale marks:	1 dB step from "6" to end of scale
Brighter scale range:	"6" to "7" (+8 dB to +12dB)
Scale length:	254 mm (10 inch)
Number of display segments:	201 segments / channel
Type of display:	neon plasma bar graph display
Colour of display.	amber up "6", red up to "7"
Indication without signal input: (termination 30 Ohm)	2 luminous segments
Measuring error under following conditions:	tolerance:
a. at mark "6": difference in reading between both channels:	within ± 0.2 dB
b. at mark "4":	within ± 0.2 dB
c. at mark "2":	within ± 0.5 dB
d. variation in supply voltage of 10 %:	within ± 1.3 dB
e. frequency range 30 Hz to 20 kHz: response at 40 kHz:	< ± 0.5 dB
response at 12 Hz:	within ± 0.3 dB
f. full temperature range:	- 6 dB ± 0.5 dB - 1.5 dB ± 0.5 dB < 0.2 dB drift at all scale points
Input sensitivity for "6" reading:	+ 8 dBu (1.95V rms)
Overload input level:	more than 20 dB above reference level (20V rms)
Adjustable range of reference levels:	+ 1 dBu to + 20 dBu
Switchable increase in input gain:	40 dB ± 0.5 dB
Inputs:	balanced, floating, input transformers
Rejection factor:	min. 60 dB
input impedance between 30 Hz and 20 kHz:	min. 10 kOhm
Integration time:	10ms ± 1 ms

Dynamic response:

	Burst	Indic.	max. Tol.
100 ms	"6"	± 0.5 dB	
10 ms	"5.5"	± 0.5 dB	
5 ms	"5"	± 0.75 dB	
1.5 ms	"3.75"	± 1.0 dB	
0.5 ms	"1.75"	± 2.0 dB	

Overload characteristic:

Isolated tone-burst at level 10 dB above reference result increasing of indication of 10 dB

voltage

Delay time:

< 15 ms

Overswing:

no overswing

Polarity error:

max. 0.5 dB

Distortion introduced by the peak programme meter:

< 0.1 %

Fall back time:

2.8 sec. ± 0.3 sec. for mark "7" to mark "1"

Difference between both channels:

< 0.1 sec.

Memory accuracy:

± 1 segment *)

Controls:

- button for changing integration time

- memory reset button

- button for 40 dB, increase of sensitivity

- button for displaying the stored peak value

- 40 dB gain increase

- display of stored maximum values

- memory reset

- brighter marks in 1 dB increments

- red LED showing

- 40 dB gain increase

- memory

- memory reset

- pcm

Remote switching:

- approx. 1200 g (2.7 lbs) net

LED display:

- 350 x 100 x 100 mm

Weight:

- XLR female for inputs

Dimensions:

- 8 pin DIN remote control socket

Items delivered:

- rubber connector for mains power

- 1. Peakmeter 1227B fitted with horizontal scale

- 2. connector (counter plug)

- 3. operating- and service instructions

Technical changes reserved !

*) Note for the user

Keep attention to the fact that memory accuracy can be affected by interferenced signals (ESD- or BURST). This may cause misreadings from the memory or meter if you are using the instrument in an interferenced environment. A specific measurement of the maximal level should be repeated if interference is suspected.

CONSTRUCTION AND DESCRIPTION OF OPERATION PEAKMETER 1227B

The RTW Peakmeter uses gas plasma bar graph display units. The entire electronics including the displays is housed in a metal casing. The display unit with its front frame, scale and keyboard is a plug-in module. The following is a description of the different electrical funktion groups.

POWER SUPPLY

The set is equipped for two different kinds of power supply. Selection of either kind is by connecting the supply voltage to the corresponding connectors.

a. Mains power supply:

The mains voltage reaches the mains transformer via the mains cable, mains connector, mains fuse and voltage selector. The transformer transforms the mainsvoltage of 240 (120) V to 22V. After rectifying and ripple rejection it is fed via a decoupling diode to the basic pcb.

b. DC power supply (22V or $\pm 15V$):

The DC supply voltage is fed via the 8 pin DIN socket and a decoupling diode to the regulator IC315.

Input voltages higher than 26 volt are fixed to a value of about 24 volts. An active filter circuit stops interference pulses generated inside the unit from entering the power supply circuitry.

The regulator IC316 delivers the positive supply voltage to the analog ICs. IC317 generates the internal ground. The difference voltage between this potential and the negative input voltage pol is the negative op am supply voltage. A 5 volt fix regulator, IC318, finaly stabilizes the supply voltage for the HCMOS logic ICs.

INPUT AMPLIFIERS, FILTERS, FULL-WAVE RECTIFIERS

The audio signals enter the operating amplifiers IC101 (IC201) via the input transformers. Potentiometer P3 and P4 control the input sensitivity (level control). On pushing the "+ 40 dB" button the gain increased by exactly 40 dB. Signals down to - 54 dB can then be measured. In the subsequent low-pass filter consisting of an active part IC102 (IC202) as well as passive R-C circuit the frequency response is restricted according to "British Standards".

The rectifier stages are followed by to timping / charging stages. In conjunction with C114 (C214) the pulse indicator as required by "British Standards 78 / 31235" is archived. The charge on the capacitor C114 (C214) depends on the level of the rectified audio signal and the integration time. The fall back time of the luminous bar is determined P5 (P6) is used to adjust this discharge time. When correctly setted, the fall back characteristics comply with the values given in "British Standards".

SAW TOOTH GENERATION AND PULSE DURATION MODULATION

For driving the display a sequence of 200 single pulses, a reset pulse and a square wave the width of which is modulated by the audio signal is required. The master clock generator IC301 generates pulses 23µs wide which drive a 12-bit binary counter. Its output address two CMOS-EPROMs (IC303, IC304). The data stored here is used for generating "RAMP"-data and control pulses. The data for generation of "RAMP"-signals is available in 12-bit format. The composition of the data is such that the "RAMP"-pulses from the D / A converter correspond to the scale graduation. This "RAMP"-voltage is compared with the rectified audio signals in subsequent comparators. At the comparator outputs appear square wave pulses with pulse width dependent on the audio input voltage and the instantaneous "RAMP"-voltage. The shape of the "RAMP"-voltage therefore determines the scale graduation of the meter. The amplitude of the "RAMP"-voltage is 2.5 Vpp. Offset errors of the rectifiers, "RAMP"-generator and comparators are compensated by the feeding a DC voltage of opposing polarity, proportional to the errors, into the inverting comparator inputs. This offset compensation is adjusted by means of potentiometers P1 and P2. Further data from the EPROMs is used to increase the pulse width to 140µs for displaying the brighter scale marks and highlighting the overload range. Greater pulse width means longer "ON"-time and brighter segments. The reset pulse resets the display as well as the counter IC. The frequency of the display cycle (time from first clock pulse to end of reset pulse) is 75 Hz.

DISPLAY DRIVERS AND HIGH VOLTAGE SUPPLY

The display driver board contains the display driver stages and high voltage power supply. In IC403 the clock pulses are turned into a 5-stroke signal. This signal drives the cathodes of the display via a driver IC404. In order that an individual display segment can strike and light up, voltage must be applied to the anode and appropriate cathode (cathodes 1, 2, 3, 4 or 5). Also, the individual segments only strike when they have been preionized by the preceding segment. The luminous band is built up by the five-phase driving of the cathodes as long as the anodes remain switched on. In order that the luminous band can give a reading on the scale, the anode and thus the luminous band must be switched off the duration of the pulse, a width-modulated square wave. The width of this pulse is proportional to the audio input voltage. The anode driver transistors T412 / T413 are switched by this square wave.

A high voltage is necessary for striking the luminous segments - approx. 210V. A multivibrator (T401-T406) generates a square wave width a frequency of approximately 10 kHz the voltage of which is multiplied to approximately 250V (open circuit) or 220V (full load). The subsequent stage stabilizes this down to the operating voltage of the display.

CAUTION

While servicing please note that some components carry high voltages. Wrong connections may lead to the immediate destruction of the voltage sensitive CMOS components.

MEMORY UNIT

Maximum levels are stored in the memory section. A master counter (IC307) delivers clock pulses to one slave counter per channel (IC308, IC309). The slave counter only registers when the number of illuminated segments exceeds that of a previous cycle. The slave count consequently corresponds to the maximum level. IC314 converts the counts into a pulse with a width that is proportional to the number of counted clock pulses. The stored maximum value represented by this pulse can be displayed, as already explained above. The slave counter can be reset using either the built-in reset using button or an external switching contact. On releasing the reset button storage is resumed.

CONNECTION AND OPERATION

The RTW Peakmeter is equipped with 4 connectors which are wired as follows:

XLR connector L + R	Pin 2 + 3	balanced, floating inputs (a+ b)
	Pin 1	case
DIN connector 8 pin	Pin 1	ext. scale switch
	Pin 5	ext. pcm button
	Pin 6	ext. + 40 dB button
	Pin 7	ext. memory reset button
	Pin 8	ext. memory display button
	Pin 4	+ 24V for single voltage supply
	Pin 2	0V for single voltage supply
		alternative
	Pin 4	+ 15V for symmetrical power supply
	Pin 2	- 15V for symmetrical power supply
European-type mains socket		240V / 50 Hz (Option 120V / 60 Hz)

POWER SUPPLY

The set is equipped for two different kinds of power supply. Selection of either kind is by connecting the supply voltage to the corresponding connector.

- AC supply voltage is connected to the built-in mains connector by means of the mains cable supplied with the set.
- 24V DC power supply is connected to pins 4 (positive) and 2 (negative) of the 8 pin DIN connector. Maximum permissible supply voltage is 36V.
- Symmetrical DC powering may be connected to pins 4 (+ 15V) and 2 (- 15V). The 0V-Line need not be connected. Maximum permissible supply voltage is $\pm 18V$.

AF INPUTS

The XLR connectors are wired according to standard. Pin 1 of the connector is connected to chassis ground.

GROUND OF THE CASING

Chassis ground is connected to pin 1 at the XLR connectors.

MODE SWITCHING ON THE METER

The RTW Peakmeter1227B features 4 keys with corresponding LEDs. The keys have the following functions:

- a. The "PPM" button changes the intergration time of the meter.
- b. The "40 dB" button increases the senstivity of the input amplifier by exactly 40 dB
- c. When the "MEMORY" button is pushed, the stored maximum levels appear on the display. If the "40 dB" indicator lights up then these maximum levels have been stored in the "+ 40 dB" mode.
- d. "RESET" button: this resets the memory allowing it to store new maximum values.
- e. A switch, located inside the unit, changes the sale resolution in the range "6" to end of scale by adding 1 dB step marks.

REMOTE MODE SWITCHING

External function selectors may be connected to pins 1, 5, 6, 7 and 8 of the DIN connector. These pins have to be switched against pin 2 of the DIN connector by means of ON-OFF keys or switches.

CALIBRATION

The Peakmeter 1227B maintains a constant accuracy. The zero setting, integration time and fall back characteristics will remain the same for years. If a readjustment is necessary, the following procedures have to be carried out.

A. 0 dB adjustment

Apply a 1 kHz sine wave at the desired reference level (usually + 8 dBu / 1.95 V) and adjust the potentiometers P3 and P4 so that both display columns show "6".

B. Zero setting

With no signal applied and the input terminated adjust potentiometers P1 and P2 so that the first two segments light up. Major adjustments in the zero setting may mean that the "6" adjustment will have to be repeated (repeat A).

C. Checking scale graduation

For checking scale calibration apply the reference level to the input. Scale calibration in the entire measuring range is determined by the data contained in the EPROMs. Readjustment or correction of this calibration is not foreseen.

Adjustment in the lower scale region ("1") can be made by changing the zero setting (P1, P2). Step "A" should be repeated. To check the "RAMP"-voltage apply an oscilloscope to pin 1 of IC305. The displayed voltage should amount to 2.5 Vpp.

D. Fall back adjustment

After removing a level of 1 kHz / + 8 dB the display reading should drop to "1" within 2.8 seconds. Adjust potentiometer P5 and P6 if necessary.

E. Response time

Checking of the response time will only be necessary if components have been replaced which determine time constants. This only applies to the IC103 (IC203) / IC104 (IC204) and the R-C circuits an appropriate pulse generator is required.

E.1. Pulses for measuring the response characteristic given in IRT specification 3 / 6 dated 1.77.

E.1.1.	Full-wave level	+ 8 dBu																		
E.1.2.	Frequency	5 kHz																		
E.1.3.	Pulse duration	100 ms, 10 ms, 5 ms, 1.5 ms, 0.5 ms																		
E.1.4.	Pulse spacing	2.8 s																		
E.1.5.	Pulse duration	<table border="0"> <thead> <tr> <th></th> <th>Rate value</th> <th>Tolerance</th> </tr> </thead> <tbody> <tr> <td>100 ms</td> <td>"6"</td> <td>± 0.5 dB</td> </tr> <tr> <td>10 ms</td> <td>"5.5"</td> <td>± 0.5 dB</td> </tr> <tr> <td>5 ms</td> <td>"5"</td> <td>± 0.75 dB</td> </tr> <tr> <td>1.5 ms</td> <td>"3.75"</td> <td>± 1.0 dB</td> </tr> <tr> <td>0.5 ms</td> <td>"1.75"</td> <td>± 2.0 dB</td> </tr> </tbody> </table>		Rate value	Tolerance	100 ms	"6"	± 0.5 dB	10 ms	"5.5"	± 0.5 dB	5 ms	"5"	± 0.75 dB	1.5 ms	"3.75"	± 1.0 dB	0.5 ms	"1.75"	± 2.0 dB
	Rate value	Tolerance																		
100 ms	"6"	± 0.5 dB																		
10 ms	"5.5"	± 0.5 dB																		
5 ms	"5"	± 0.75 dB																		
1.5 ms	"3.75"	± 1.0 dB																		
0.5 ms	"1.75"	± 2.0 dB																		

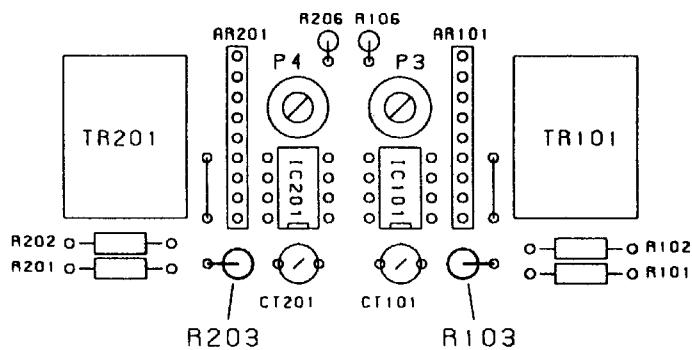

- E.2. If readings higher than those permitted by the tolerance range are displayed at longer pulses (5 ms to 100 ms) then the charging resistor R119, (R219) determining the time constant of the R-C-circuit has to be increased. If the readings obtained are less than those permitted, the resistance should be reduced. Use only metal film resistors.
- E.3. If readings higher than those permitted by the tolerance range are displayed at shorter pulses (0.5 ms to 1.5 ms) then the charging resistors R121 (R221) determining the time constant of the R-C circuit has to be increased. If the readings obtained are less than those permitted, then the resistance should be reduced.
- E.4. After changing values of the R /C combination for long (short) pulses, the response to short (long) pulses has to be checked and readjusted, if required. Continue to adjust alternately until values are within the specified tolerances.

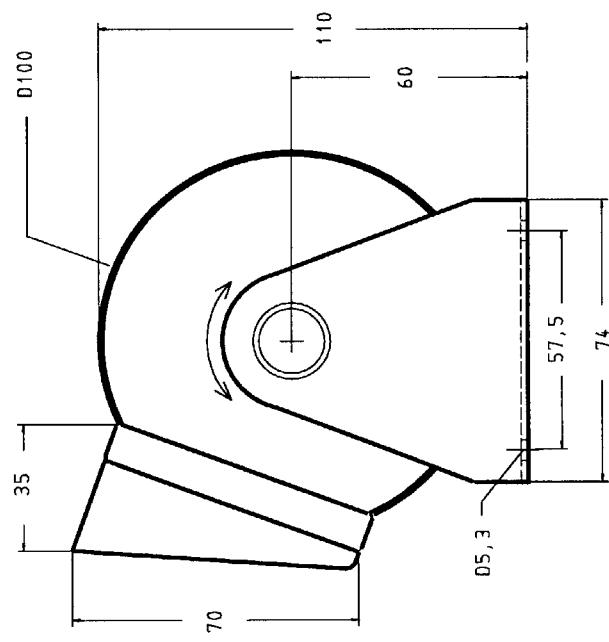

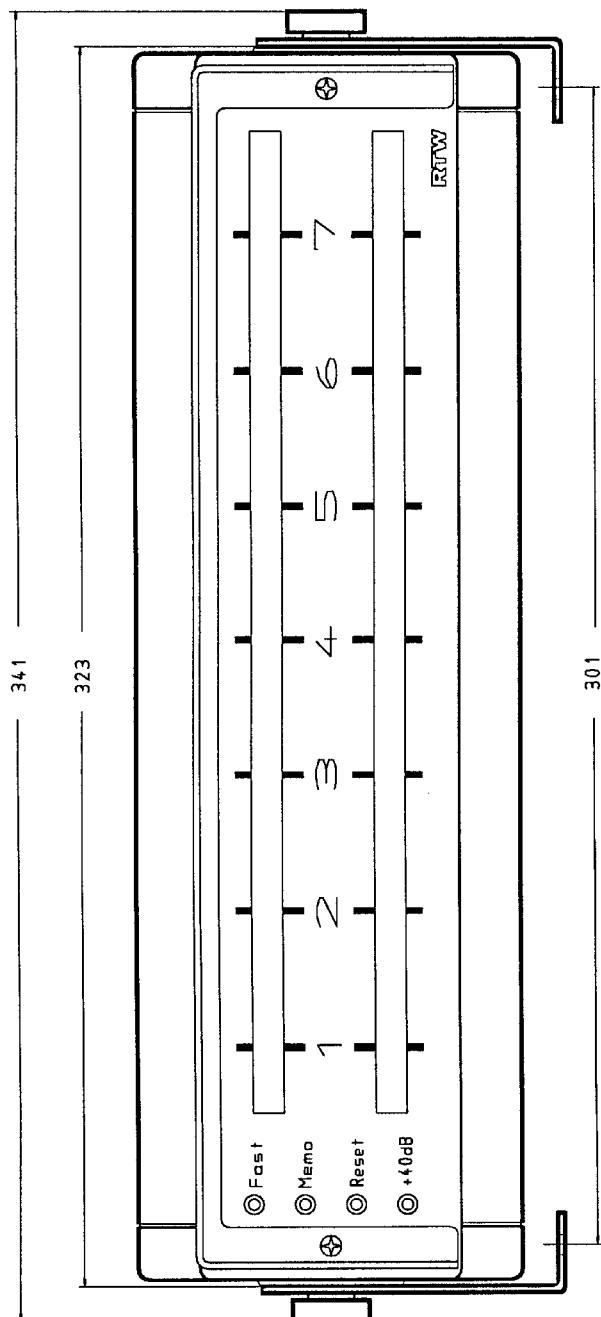

F. REFERENCE LEVELS OTHER THAN 1.95 V:

If the meter is to be used in installations with reference levels other than that set in the factory, then following modifications recommended:

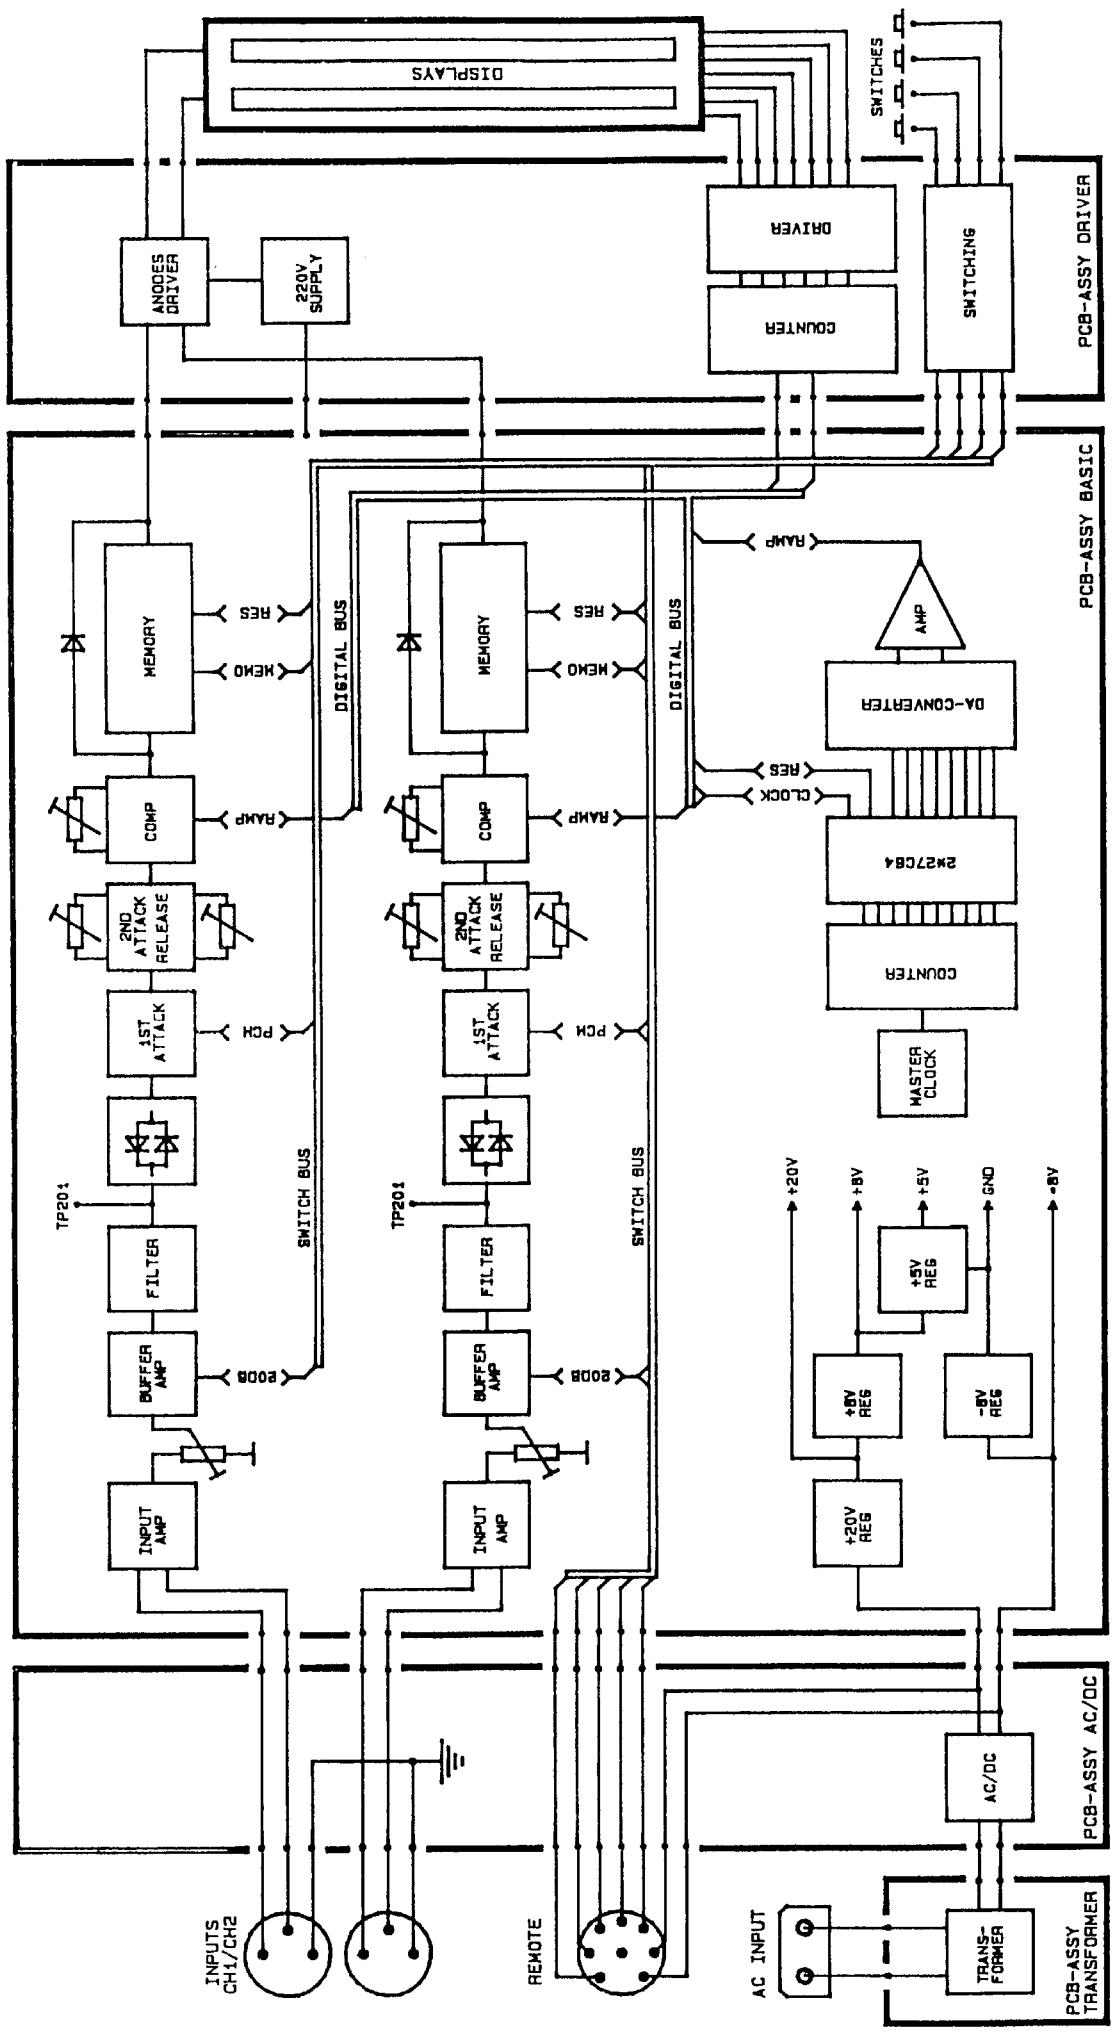

- F.1. For levels ranging from + 2 dBu to +10 dBu:
 Adjust potentiometers P3 and P4.

- F.2. For levels ranging from + 10 dBu to + 18 dBu:
 The attenuation must be increased so as not impair the overload capacity of the meter This can be done by inserting resistors R103 and R203 as voltage dividers. For fine adjustment use potentiometers P3 and P4. The maximums input level is then raised to + 30 dBu.

**EG-Konformitätserklärung nach Artikel 10.1 der Richtlinie 89/336/EWG
und der Richtlinie 73/23/EWG**

Wir,

**RTW GmbH & Co.KG
Elbeallee 19 · 50765 Köln · Germany**

erklären in alleiniger Verantwortung, dass das Produkt:

RTW PPM 1227 E und B

auf das sich diese Erklärung bezieht, mit den folgenden Normen bzw. normativen Dokumenten übereinstimmt:

EMV 89/336/EWG

EN 50081-1 (März 1993): EN 55022 B, gestrahlt
EN 55022 B, leitungsgeführt

EN 50082-1: EN 61000-4-2
 EN 61000-4-3
 EN 61000-4-4
 EN 61000-4-5
 EN 61000-4-6
 EN 61000-4-11

Sicherheit 73/23/EWG

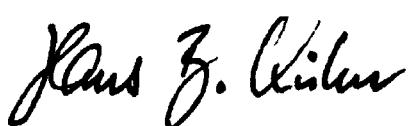

EN 60950 (1992 + A1/1993)

Geprüft und dokumentiert von nachfolgend aufgeführten Firmen:

**ELEKLUFT GmbH, Bonn, akkreditiertes Prüflabor
RTW GmbH & Co.KG, Köln**

Datum und Unterschrift des Verantwortlichen:

20.02.2001

EC-Declaration of Conformity Directive 89/336/EEC

and Directive 73/23/EEC

We,

RTW GmbH & Co.KG
Elbeallee 19 · 50765 Köln · Germany

declare under sole responsibility that the product:

RTW PPM 1227E and B

meets the intend of the Directive 89/336/EEC and Directive 73/23/ECC. Compliance was demonstrated to the following specifications as listed in the official journal of the European Communities:

EMC **89/336/EEC**

EN 50081-1 Emissions (march 1993): EN 55022 Radiated, Class B
EN 55022 Conducted, Class B

EN 50082-1 Immunity:
EN 61000-4-2
EN 61000-4-3
EN 61000-4-4
EN 61000-4-5
EN 61000-4-6
EN 61000-4-11

Safety **73/23/EEC**

EN 60950 (1992 + A1/1993)

Tested and documented by the following companies:

ELEKLUFT GmbH, Bonn, accredited EMC laboratory
RTW GmbH & Co.KG, Köln

Date and signature of the responsible person:

20.02.2001
